Tacit

Human decisions as the engine of growth.

Profitability through an agentic strategy built on how people in the company already think and work.

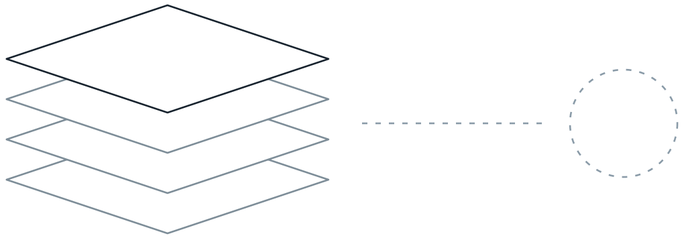

Confidential

Companies are systems made by people.

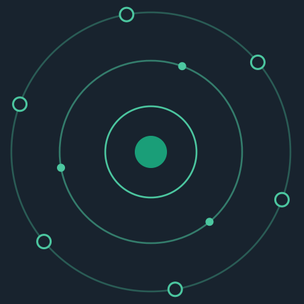

Agents improve them only when the human knowledge behind the system is understood.

THE USUAL BET

Capital goes to connecting context and dropping in agents, then hoping the culture follows.

OUR BET

Capital goes to reading how work happens, restructuring, then agentizing from that culture.

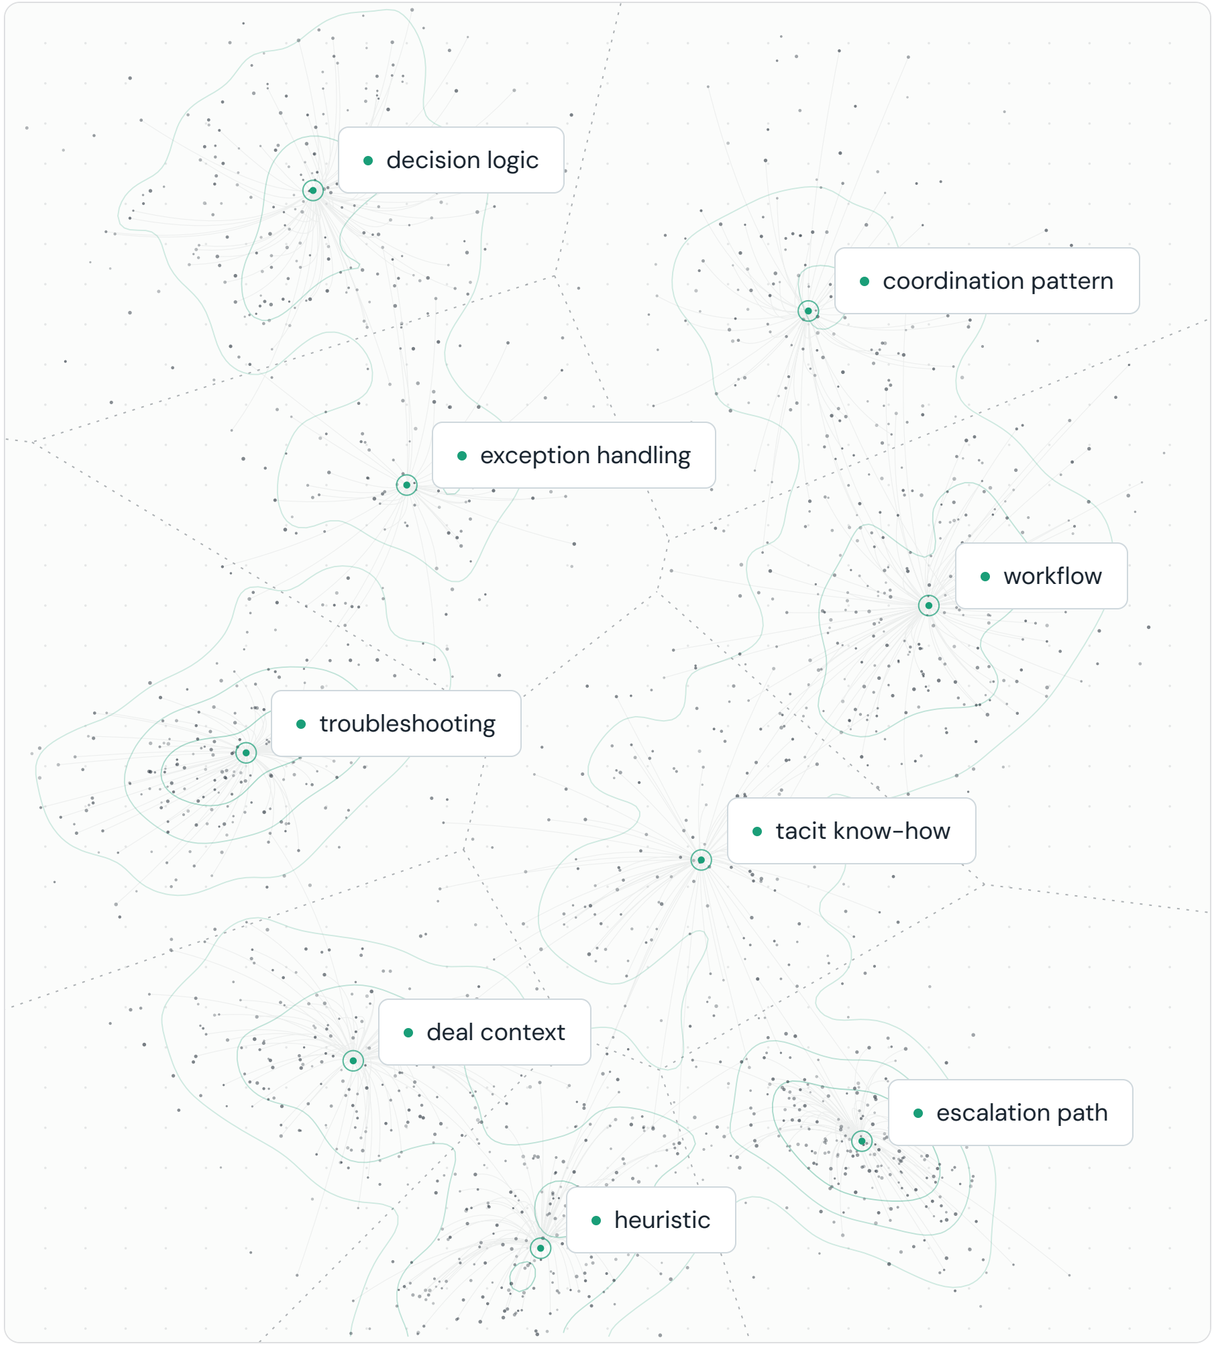

Companies can’t see where their work breaks.

Inefficiencies and bottlenecks live silently, unrecognized, and no system in the company shows them.

- Companies already bought the stack.

WHAT THE SPEND MISSES

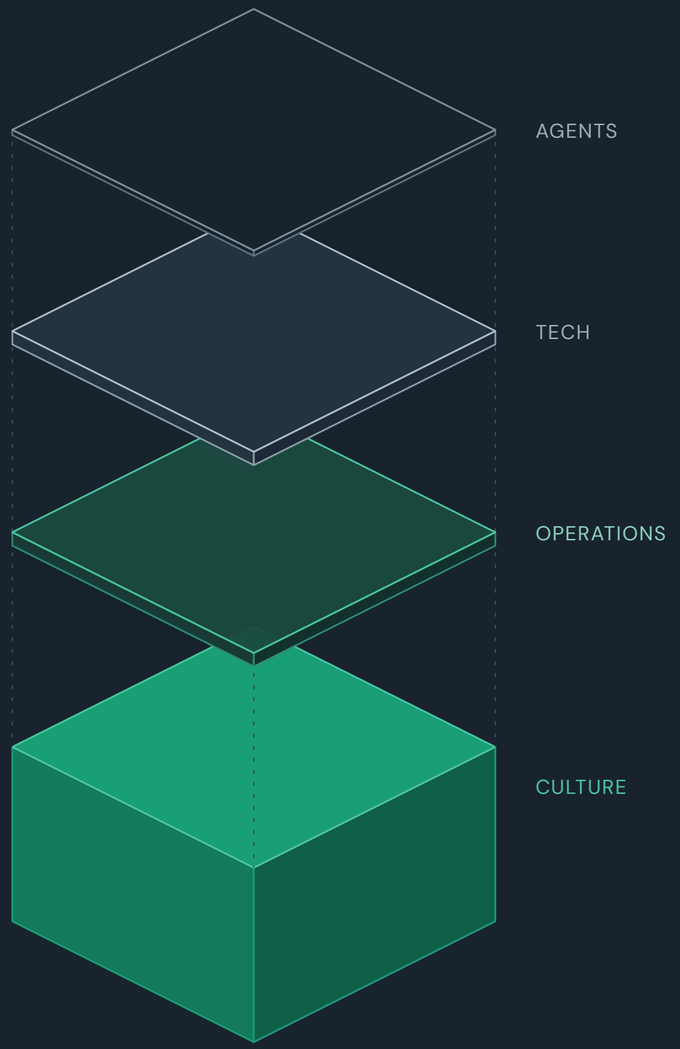

The failure is cultural: how people work, who they trust, which habits win under pressure. Another tool does not fix that. That gap is the market.

Agentic success runs on judgment and culture. Tacit makes both legible.

> Tacit captures the daily workflows and the tacit decisions behind them, and detects the inefficiencies where agents create the most value.

Tech is a layer, not the whole story.

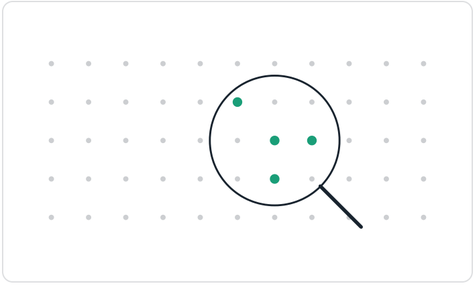

Four services. One sequence.

01

Diagnostic

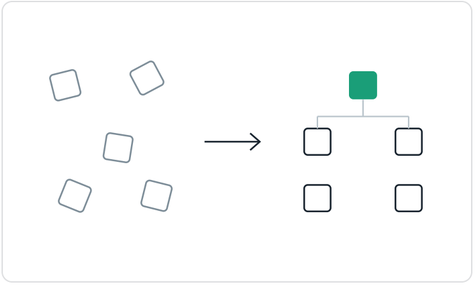

Map where expertise lives, how it is used, and which tools and steps are not productive.

02

Change premises

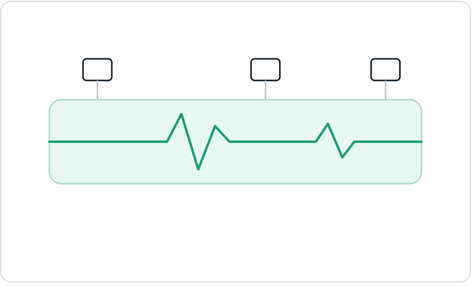

Change how the team works and trains: education, roles, and structure. Surface the inefficiencies and the bottlenecks.

03

Core basic agents

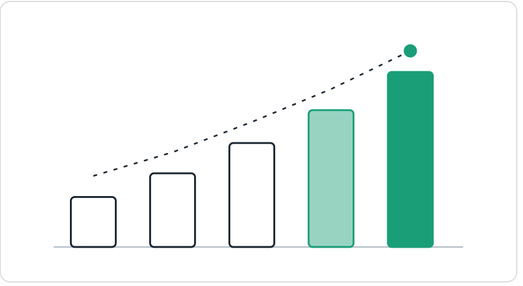

Implement Tacit and the tools people will actually use, so know-how becomes a living layer.

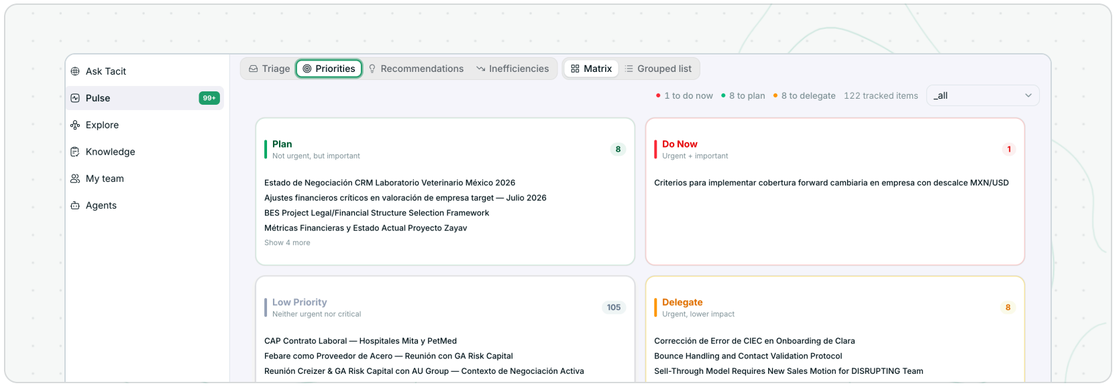

04

Agentification

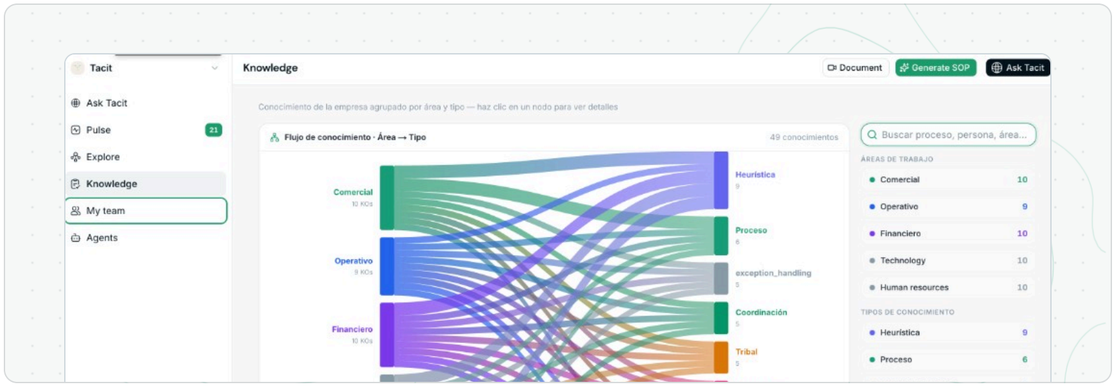

Ship specific agents that show a visible gain, then extend them with the same people.

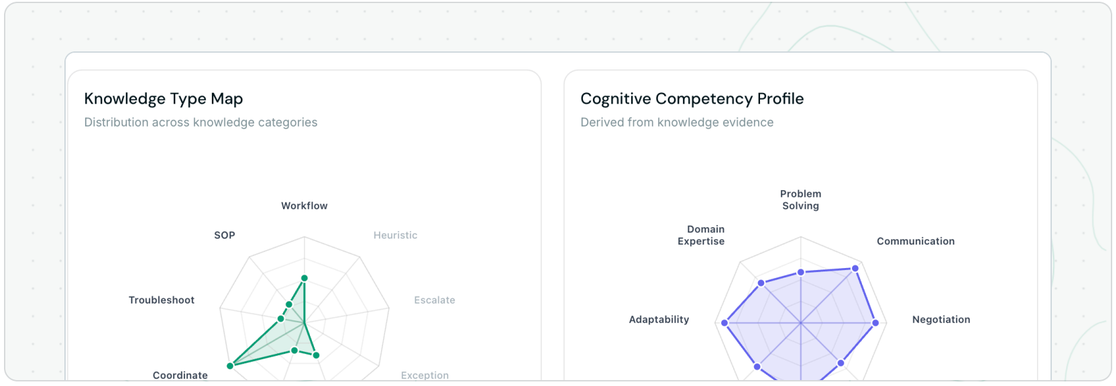

Four views. One product.

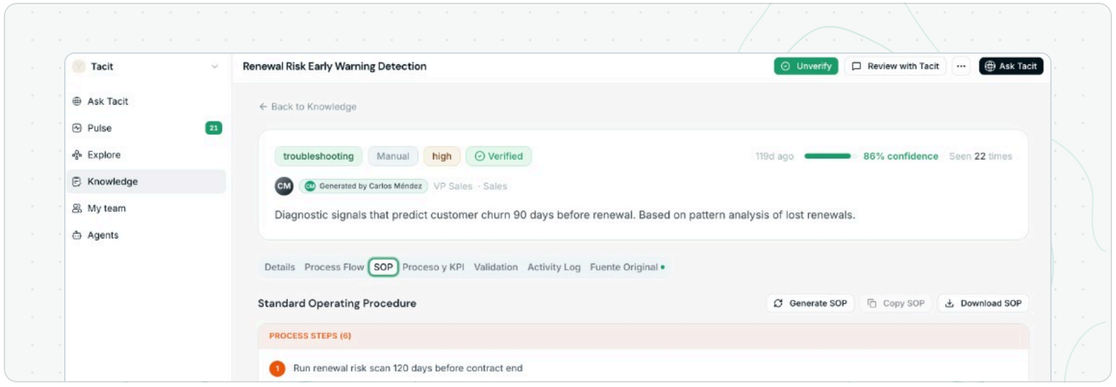

Pulse 01

Knowledge 02

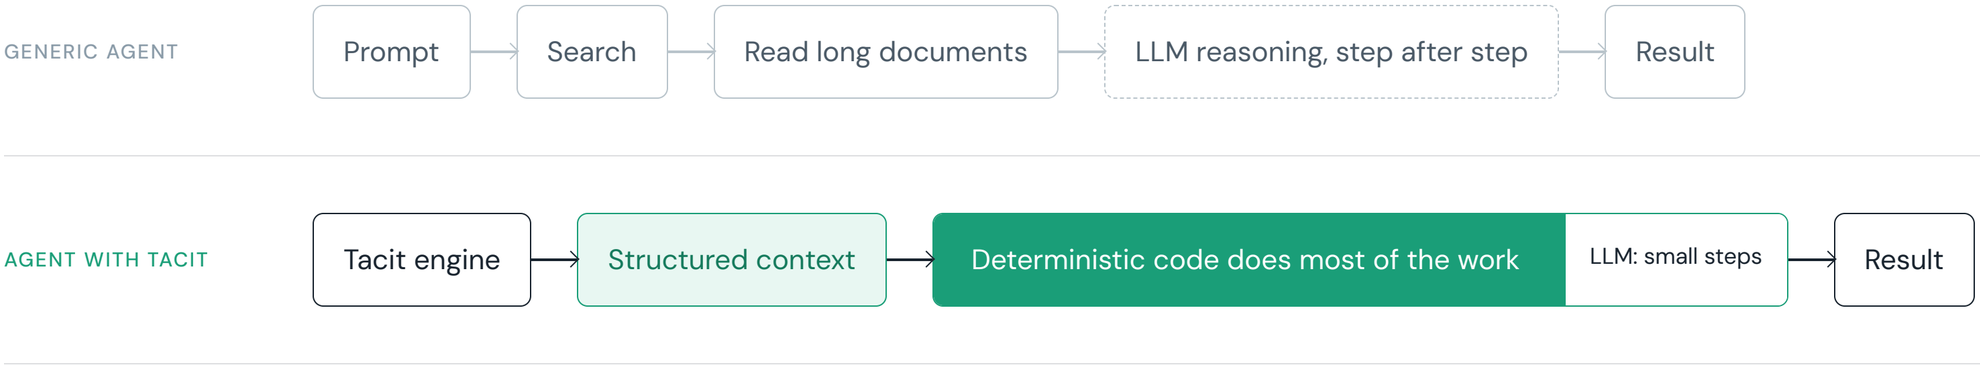

Profiles 03

A procedure 04

Simple agents. Very low cost.

The agent receives the context already structured from Tacit and resolves most of the work with deterministic code. The language model only handles small steps.

- No heavy spend on language models
- No extra SaaS
- No reading of long contexts

From a viable engine to a commercial company.

MONTHS 1 TO 3

Viable engine

Build the first engine that extracts tacit knowledge.

THEN

Prove it live

Run it inside companies. Find the errors and what to improve.

NOW

Paying clients

First paying clients. Gauge industry appetite and set the long-term pricing model.

12 MONTHS

50 clients

Run them as proofs of the benefit inside companies.

END OF 2027

Accelerate

Invest in the commercial structure and the positioning that speed growth.

In parallel. An academic team keeps sharpening the engine that extracts and processes tacit knowledge for agentic implementation.

Already inside real companies.

mora health Mora Health	ONEST SMARTLOGISTICS Onest	DISRUPTING Disrupting	LoyalTech LoyalTech
G | P Grupo Platino	CONDOR MEDIA Condor Media	 Birdie	Six companies connected. Two are already paying.

Built by academics, experienced entrepreneurs, and executives.

The founders come from consulting, entrepreneurship, and academia. The vision starts in academia and is shaped by real business experience.

Tacit

Start with the culture you already have.

Every company will need agents. The winners will build them on how their own people work and decide.

The knowledge behind the work.
